Mohamed Aamir Maniar

Leading Innovations at ManiarTech® | Director of Engineering |
Software Architect | Enterprise Business Process Automation Expert
| Tech Consultant
Mumbai, Maharashtra, India

Summary

As the founder of ManiarTech®, I stand at the forefront of technological innovation with over 25 years of experience in the tech industry. My career is defined by a deep-seated commitment to developing advanced software solutions, particularly in the realms of business process automation and Robotic Process Automation (RPA). My journey is not just about building a company; it's about pioneering solutions that redefine how businesses operate in the digital age.

With a foundation in software architecture and a keen eye for technological advancements, I have led ManiarTech® to become a beacon of innovation in the industry. My role extends beyond traditional leadership; it involves being a strategist, a visionary, and a tech consultant, all rolled into one. This unique blend allows me to offer unparalleled insights and solutions to our clients, ranging from burgeoning startups to established corporations.

Key areas of expertise include:

✓ Innovative Software Architecture :

Architecting and developing groundbreaking technology solutions that enhance organizational processes' efficiency, scalability, and adaptability.

✓ Strategic Tech Consulting :

Providing comprehensive, data-driven guidance to businesses, aiding them in navigating the complexities of digital transformation and market competition.

✓ Business Process Automation & RPA Expertise :

Streamlining operations with innovative technological interventions, significantly boosting productivity and cost-effectiveness.

✓ Technical Architecture & System Integration :

Building and integrating complex enterprise systems essential for modern, efficient business operations.

✓ Rich Industry Experience:

Leveraging a quarter-century of experience to overcome challenges and achieve exceptional results, setting new benchmarks in the tech world.

My goal is to share this wealth of knowledge and experience. I am always on the lookout for new challenges and opportunities, especially in freelance projects and consulting roles. If you're seeking a partner to guide you through the intricacies of technology and to drive your business toward success, let's connect and explore the possibilities.

Experience

Maniar Technologies Private Limited

Founder, MD (Engineering, Research and Innovation)

April 2009 - Present (17 years 4 months)

Mumbai Area, India

In 2009, I embarked on a journey to create ManiarTech, driven by a vision to merge passion with cutting-edge technology. Our aim has been to cultivate a workspace where creativity in software development is paramount, and where every project is a step towards innovation.

At the core of ManiarTech's philosophy is a commitment to advanced software architecture, utilizing microservices to build scalable and efficient systems. We specialize in Business Process Automation, enhancing operational workflows through intelligent, automated solutions. Upholding the highest standards, we are proud to be certified in ISO 9001 QMS and ISO 27001 ISMS, ensuring top-tier quality and information security in all our endeavors.

Our technical prowess is further exemplified by our proficiency in Golang and Python, languages that are fundamental to our development of modern, progressive web apps (PWAs). These apps are not just functional; they

are designed to be intuitive, user-friendly, and future-proof, embodying the essence of innovation.

We're passionate about creating software solutions that are not just innovative but also creatively intelligent. Our team excels in developing Single Page Applications (SPAs) and progressive web apps that push the boundaries of what's possible, delivering an unparalleled user experience.

As Founder, Innovator, and Managing Director, I am deeply involved in all aspects of our projects, from conceptualization to implementation, ensuring that each solution not only meets but exceeds our clients' expectations. Our journey at ManiarTech is ongoing, and with each project, we strive to set new standards in software development, embracing modern technologies to build intelligent systems that redefine efficiency and creativity.

Oakton

Technical Lead

March 2008 - March 2009 (1 year 1 month)

In my role as Technical Lead at Oakton, a premier IT service company in Australia, I was instrumental in the Nova TCS/IMES project, aimed at managing the Traffic and Infringements Life Cycle for Victoria State.

=== Responsibilities ===

✓ Design Review and Compliance: In the offshore design review panel, I ensured that software designs for designated use cases met both functional and non-functional requirements, aligning with our high design standards and being readily comprehensible to developers.

✓ Mentoring and Framework Development: I leveraged my expertise in smart client technologies to mentor the team and develop reusable smart client frameworks, along with guiding WPF user control development.

✓ Iteration Leadership: As the iteration lead, my responsibilities extended to ensuring on-time project delivery, adherence to best practices, effective resource allocation, and proactive defect management in requirements. A key focus was maintaining team harmony and productivity.

=== Project Environment ===

✓ The project was developed on the .Net 3.5 platform, utilizing C# 3.0, with key technologies including Windows Presentation Foundation, Windows Communication Foundation, and Windows Workflow Foundation.

✓ Tools like SQL Server 2005, Team Foundation Server, and Enterprise Architect 7 were integral for database management, collaboration, and design.

In this role, I combined strategic leadership with technical expertise, ensuring that our team not only met but exceeded project goals, delivering innovative solutions for traffic and infringement management.

JP Morgan

Associate - Investment Bank Technology

December 2006 - February 2008 (1 year 3 months)

During my tenure at JP Morgan, a leading global financial institution, I contributed as a Technical Associate, focusing on enhancing the technology framework within the banking sector.

=== Roles and Responsibilities ===

✓ Collaboration and Requirement Analysis: Actively interacted with the Australian team to understand requirements, contributing to the design and development of new features and modules. This involved a detailed analysis of user needs and business processes.

✓ Team Building: Spearheaded the development of an offshore team dedicated to the JPMorgan Onsite project, ensuring effective collaboration and efficient project management.

✓ FIX Analyzer Development: Designed a scalable FIX (Financial Information Exchange) Analyzer application. This tool was pivotal in analyzing logs created in the FIX protocol and included a script execution environment, compiler, and editor for querying logged FIX messages.

✓ IOI Module Design: Developed a solution for the IOI (Indication of Interest) module, focusing on streamlining communication and trading processes.

=== Technical Environment ===

✓ Worked in a .Net 2.0 environment, utilizing languages like C# and VB.Net, and specialized in Windows Form development.

✓ Leveraged FIX protocol for financial data communication and analysis.

My role at JP Morgan was characterized by a blend of technical proficiency and leadership, contributing significantly to the bank's technological advancements in the financial sector.

Countrywide Finance Corporation (Now Bank of America)

Senior Analyst

January 2005 - December 2006 (2 years)

During my time at Countrywide Finance Corporation, recognized as "North America's Most Admired Fortune 500 Company" by Fortune Magazine, I held the role of Senior Analyst and Technology Architect.

=== Roles and Responsibilities ===

✓ System Analysis and Application Design: Focused on high-level application design, incorporating extensive system analysis to align technology solutions with business needs.

✓ ORM Framework Development: Developed a Business Object Framework, an innovative ORM (Object Relationship Mapper). This tool, designed using VisualStudio.Net, enabled the creation and management of robust Business Objects that seamlessly integrated data persistence, business rules, and business relations.

✓ User Experience and Interface Design: Played a pivotal role in enhancing user experience through well-thought-out interface designs, ensuring usability and efficiency.

✓ DDAS System Architecture: Designed the application architecture for the DDAS (Due Diligence Automation System), which involved creating comprehensive UML diagrams like use cases, class diagrams, activity diagrams, and deployment diagrams.

✓ CSLA Architecture Implementation: Implemented the middle layer using CSLA (Component-based Scalable Logical Architecture) Architecture in the SDDesk Project, enhancing scalability and logic separation.

✓ Code Review and Mentorship: As a senior team member, I conducted code reviews and provided mentorship on technical aspects, ensuring quality and knowledge sharing.

=== Key Projects ===

Worked on notable projects like DDAS (Due Diligence Automation System), CMR (Countrywide Management Reporting), CSC Contact, and SDDesk (Scratch and Dent Desk).

My tenure at Countrywide Finance Corporation was marked by significant contributions to system analysis, application design, and technical leadership, driving innovations in financial technology.

Patni Computer Systems (Now IGATE)

Senior Software Engineer

July 2004 - January 2005 (7 months)

During my tenure at Patni Computer Systems, recognized for its CMM level 5 status and as one of India's best companies, I served as a Senior Software Engineer. My primary project was the DPXL Arm (Display Pro XL for ARM).

=== Roles and Responsibilities ===

✓ My Plan Portal Development: Led the design and development of the "My Plan Portal," a customizable web portal providing real-time access to factory floor data. This involved creating a user-friendly interface and ensuring real-time data integration.

✓ System Architecture Design: Responsible for designing the Application Service Interfaces and the Data Access Layer. This layer was uniquely capable of handling multiple types of data sources, including RDBMS, CSV, and plain text files.

✓ Page Object and Charting Engines: Developed a Page Object Engine and a Charting Engine, contributing to the robust functionality and data visualization capabilities of the portal.

This role at Patni Computer Systems enabled me to hone my skills in web development and data management, contributing to a project that streamlined access to critical manufacturing data.

Cautel Web Solutions Pvt. Ltd.

System Analyst

August 2000 - July 2004 (4 years)

At Cautel Web Solutions Pvt. Ltd., an emerging web solution company, I served as a System Analyst, playing a key role in the design, development, and execution of a wide array of projects.

=== Key Contributions ===

✓ **Project Diversity:** Successfully led and executed a diverse range of projects, from small online profiles to complex multi-tier web systems, desktop client-server applications, and multi-device applications. I also ventured into the creation of flash presentations and fully-fledged e-commerce product CDs.

✓ **Notable Projects:** Contributed to significant projects like www.event2go.com, various modules of Data Industries' COMS project (Expense, Purchase Order, Commission, Marketing, Embedded Marketing, Timesheet), Glitter Product CD, and websites such as www.gotproject.com, www.gemsnjewelries.com, www.HallZone.com, www.HerbHealer.com, and www.Jobmachining.com.

=== Roles and Responsibilities ===

✓ **Application Development:** Spearheaded the development of various web and desktop applications, ensuring functionality, user-friendliness, and reliability.

✓ **Project and Team Leadership:** Led project teams, ensuring timely delivery and quality of work while fostering a collaborative and productive team environment.

✓ **System Analysis and Design:** Conducted thorough system analyses and designed applications that met specific business requirements and user needs.

✓ **Training and Mentorship:** Provided training and mentorship to team members in technologies such as ASP 3.0, ASP.Net, HTML, JavaScript, Visual Basic 6.0, and C#.

During my tenure at Cautel Web Solutions, I was instrumental in driving the company's growth in web solutions, leveraging my expertise in system analysis, application development, and team leadership.

Aptech

Faculty and Lab Instructor

April 2000 - August 2000 (5 months)

During my tenure at Aptech, widely recognized as one of India's most reputable software training institutes, I served as a Faculty and Lab Instructor at the Thane facility.

=== Roles and Responsibilities ===

✓ Training and Instruction: Conducted both personal and classroom-based training sessions. My approach was focused on delivering comprehensive and interactive learning experiences to students across various technology domains.

✓ Technology Expertise: Specialized in teaching a diverse range of technologies, including VB 6.0 for software development, Web Development with ASP 3.0, foundational programming languages like Java and C++, as well as fundamental web technologies such as HTML.

✓ Software and Internet Training: Apart from programming languages, I also imparted knowledge in essential software tools like MS Office and provided training in Internet Awareness, equipping students with a broad spectrum of IT skills.

This role at Aptech allowed me to contribute significantly to the learning and development of aspiring IT professionals, leveraging my expertise in a variety of technical subjects.

Freelancer. Self employed.

Software Developer

November 1998 - April 2000 (1 year 6 months)

As a self-employed freelance software developer, I engaged in various projects, utilizing a blend of technologies to create both web-based and client-server desktop applications.

=== Key Aspects of Work ===

- ✓ **Diverse Technology Utilization:** My projects involved the use of VB (Visual Basic) for application development, SQL Server and MS Access for database management, ASP for web development, and COM (Component Object Model) technologies.
- ✓ **Web and Desktop Application Development:** Developed a range of applications, from dynamic websites to robust client-server desktop solutions, catering to diverse client needs.
- ✓ **Software Development Skills Applied:** Demonstrated expertise in areas such as User Experience, Software Architecture, and Web Development. Employed JavaScript for frontend development, along with principles of OOAD (Object-Oriented Analysis and Design) and Application Architecture.
- ✓ **Requirements Analysis:** Conducted thorough analysis to understand client requirements, ensuring that the final product aligned with their expectations and needs.

This period as a freelancer allowed me to hone my skills in various aspects of software development, from conceptualization to deployment, offering tailored solutions to clients.

Education

Gujarat University

Bachelor of Commerce (B.Com.), Commerce with Software Engineering · (1994 - 1997)

Computer Engineering and Software Technology from GEBBS Institute (Mumbai, India)

Diploma in Computer Engineering and Software Technology, Software Design and Development · (1998 - 1998)
